

West Linn Paper Company

OUR MISSION

At the West Linn Paper Company, our mission is to continually exceed customer expectations through a commitment to responsive, personalized service along with reliable and competitive products in the coated free-sheet market.

WEST LINN HISTORY

West Linn Paper Company is located at the base of the historic Willamette Falls, just a few miles from downtown Portland, Oregon. Founded in 1889, the mill originally produced a variety of products including newsprint, creped toweling and gun cotton. In the 1940's, production shifted to the development and manufacturing of coated paper – which had a significant impact on the publishing industry in the West. In 1997, the mill was purchased by Belgravia Investments and re-opened as the West Linn Paper Company. Today, we are the only coated free-sheet paper manufacturer in the western United States.

WHAT WE OFFER

The Capistrano® and Sonoma® brands of #2 and #3 coated free-sheet web papers are well-known and respected throughout the industry. The Nature Web® and Nature Plus® lines of recycled paper are made with up to 30% post consumer waste and are FSC certified. Both FSC and SFI certification options are available on a number of grades. We manufacture over 700 tons of paper each day on three machines and our products are distributed throughout North America for the printing of advertising materials, catalogs, magazines, book publishing and direct mail.

CUSTOMER SERVICE

As a small, independent mill, we offer customer service and attention to detail that is often overlooked with larger mills. By remaining flexible in our manufacturing, we deliver what our customers need – quality paper and fast, on-time delivery. Each knowledgeable sales, technical support and customer service representative provides the personalized service and attention to detail that make doing business with us easy.

ENVIRONMENTAL RESPONSIBILITY

Through sound environmental practices and careful management, we strive to preserve and protect the natural beauty that surrounds us. Continually reviewing and improving waste reduction, energy efficiency and environmental policies are part of our commitment to produce our products in a more sustainable way. We are proud of our accomplishments and are dedicated to constantly improving the mill operations and environmental practices for the betterment of the community and the business.
